(54) Title: LAMINANT CONTAINER WITH FITMENT

(57) Abstract: According to the present invention, there is provided a container for use in storing an energy storage cell, the container including a package material of at least two layers physically attached to one another and extending material extending outside the container whereby the extending material transfers electrical and thermal energy into outside of the container through a fitment. Also provided by the present invention is a fitment for creating a leak proof seal in a container for containing an energy storage cell made up of a heat sealable material. A method of making a container by forming a package material of at least two layers, extending a metal material from the inside of the package material through a fitment, thereby preventing leakage is also provided.
